

Control and Results

from Symbiotic Projects

These days, the changing behaviour and expectations of businesses demand constant monitoring, measuring and management – especially with regard to financial information. Managers and Directors need quick and easy access to snapshots of financial information, allowing effective management decisions to be made swiftly and accurately. With immediate access to dynamic real-time data sets, internal personnel can exercise total control over general finance and specific projects.

A systematic approach to management

Control and Results is a systematic approach to identifying and managing an organisation’s project portfolio plus ancillary risks. Deployed over the web, *Control and Results* can be accessed by you or your staff at any time, from any location. Using this flexible analytical tool in a way that precisely matches your needs, you can quickly obtain specific project information such as:

- The hours worked on a range of projects by any number of individuals
- Whether projects are running within budgets
- Invoicing – what’s been invoiced and what needs to be billed?

You can create your own Management Reports or SPL can generate them on your behalf; and if you need a management summary, reports can be derived at all levels - from activity code level to programme status.

Tailor-made in 24 hours

We can deploy a bespoke system within 24 hours - and, working closely with you, we will agree the specific requirements of your Control and Results system prior to implementation. We’ll also consult with your organisation in order to provide a detailed implementation process – plus we’ll train users (at your premises, off-site or remotely) and provide a working-hours help-desk to answer any queries you may have.
